Profile

Information Technology student at Politeknik Negeri Malang with a primary interest in backend development. Has experience in MySQL database design as well as web application development and deployment using Laravel in a virtual machine environment. Currently expanding competencies in the JavaScript ecosystem through learning Express.js. Adaptive, collaborative, and possessing good problem-solving skills, with supporting understanding in DevOps aspects.

Project

MSJ ERP Persediaan (July 2026 - Now)

Tech Stack: MSJFramework (Laravel 12), PostgreSQL, Bootstrap, Blade, JS Native

Description: A web-based inventory and warehouse management system that manages the flow of goods from requests, inter-warehouse transfers, stock adjustments, to stocktaking, with a data structure inspired by SAP for tracking stock down to the batch level per warehouse.

Human Resource Information System Self Service (February - July 2026)

Tech Stack: MSJFramework (Laravel 12), MySQL, Bootstrap, Blade, JS Native

Description: Developing a web-based HRIS application with a self-service approach that supports the integrated management of employee data and administrative processes, including updating employee information, professional journey dynamics, and managing changes in employment status.

Sistem Manajemen Pelaporan dan Perbaikan Fasilitas Kampus (April - July 2025)

Tech Stack: Laravel (PHP), MySQL, Tailwind CSS, Blade

Description: Sistem yang mempermudah pelaporan kerusakan dan pemantauan perbaikan fasilitas oleh mahasiswa, dosen maupun staf secara cepat dan terstruktur.
